Preventing problems from corrosion, scale, and rust !

Fans create air flow that cools down heat exchangers and the circulating water inside.
Spraying water for 2-3 hours during daytime helps cool down the air, and the heat exchangers.

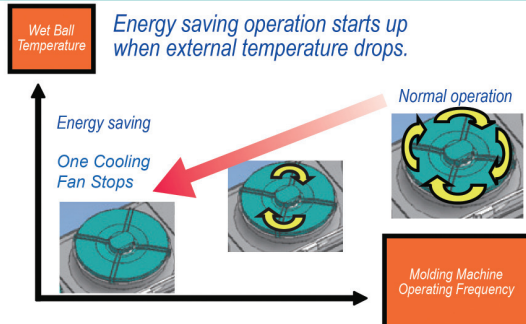

Maintain water quality, Save energy, Save water !

Recycle pump operating under energy saving mode

Cooling fan operating under energy saving mode

Are corrosion, scale and rust causing you troubles ?

0.5 mm-thick scales can increase power consumption to 160%

e.g., corroded heat exchanger

e.g., broken heater
